

Prisca 5.1.0.17
Date of report: 22-12-2025

Patient data			
Name	Mrs. ROMA	Patient ID	0772512210065
Birthday	23-03-1993	Sample ID	B4245127
Age at sample date	32.7	Sample Date	21-12-2025
Gestational age	12 + 1		
Correction factors			
Fetuses	1	IVF	no
Weight	75	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	3.64 mIU/mL	1.41	
fb-hCG	44.01 ng/mL	1.03	
Risks at sampling date			
Age risk	1:420	Gestational age	12 + 1
Biochemical T21 risk	1:4871	Method	CRL Robinson
Combined trisomy 21 risk	<1:10000	Scan date	21-12-2025
Trisomy 13/18 + NT	<1:10000	Crown rump length in mm	58.8
		Nuchal translucency MoM	0.25
		Nasal bone	present
		Sonographer	NA
		Qualifications in measuring NT	Sonographer
Risk		Trisomy 21	
The graph illustrates the risk of Trisomy 21 across different gestational ages. The risk is categorized into three zones: red (above cut-off), yellow (below cut-off but above age risk), and green (below cut-off). A vertical black bar at age 33 shows the patient's calculated risk is in the green zone, indicating a low risk.		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
