

Prisca 5.1.0.17
Date of report: 22-12-2025

Patient data			
Name	Mrs. RITA TIWARI	Patient ID	0852512200104
Birthday	05-07-1987	Sample ID	B4046697
Age at sample date	38.5	Sample Date	20-12-2025
Gestational age	11 + 6		
Correction factors			
Fetuses	1	IVF	no
Weight	80	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	0.66 mIU/mL	0.31	11 + 6
fb-hCG	45.39 ng/mL	1.02	Method
			CRL Robinson
			Scan date
			20-12-2025
Risks at sampling date		Trisomy 21	
Age risk	1:115	Crown rump length in mm	54.2
Biochemical T21 risk	>1:50	Nuchal translucency MoM	0.69
Combined trisomy 21 risk	1:236	Nasal bone	present
Trisomy 13/18 + NT	1:2515	Sonographer	NA
		Qualifications in measuring NT	Sonographer
		The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk. After the result of the Trisomy 21 test (with NT) it is expected that among 236 women with the same data, there is one woman with a trisomy 21 pregnancy and 235 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
		Trisomy 13/18 + NT The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:2515, which represents a low risk.
