AMYLASE, SERUM

Sample Type : Serum

AMYLASE	92.0	U/L	UPTO 80	CNP-G3, KINETIC
---------	-------------	-----	---------	-----------------

Interpretation

Amylase is a marker of pancreatic disease - elevated in acute pancreatitis, acute exacerbation of chronic pancreatitis; drug induced acute pancreatitis and obstruction of pancreatic duct by stone / carcinoma.

BIOCHEMISTRY

22253510043

Test Description	Value(s)	Units	Biological Ref Range	Method
------------------	----------	-------	----------------------	--------

LIPASE, SERUM

Sample Type : Serum

LIPASE	176.6	U/L	UPTO 60	ENZYMATIC
--------	--------------	-----	---------	-----------

Interpretation

Lipase is an enzyme produced almost exclusively from pancreatic acinar cells. Pancreatic injury increases serum lipase levels. In Pancreatitis, it rises almost at same time as amylase (4-8 hrs) but the elevation lasts much longer (7-10 days) as compared to amylase.

------------------	----------	-------	----------------------	--------

Prothrombin Time (PT INR) ,Plasma

Sample Type : Plasma Citrate

Pt. Patient Value : 13.7 Sec. 11.0-16.0 Photo Optical Clot Detection

MNPT (Mean Normal Prothrombin Time) 13.5 Sec.

Prothrombin Ratio : 1.01

INR (International Normalized Ratio) : 1.11 - 0.8-1.19

Interpretation : The target INR for anticoagulant therapy is 2.5 (range 2.0-3.0) or as advised by the treating clinician. For INR >3.0, please refer immediately to treating clinician for further clinical management of bleeding and excessive anticoagulation.

The prothrombin time (PT) and international normalized ratio (INR) are measures of the extrinsic pathway of coagulation.

The INR is used only for patients on stable oral anticoagulant therapy. It makes no significant contribution to the diagnosis or treatment of patients whose PT is prolonged for other reasons.

Increased PT times may be due to:

Factor deficiencies(X , II , V , I), Coumadin (warfarin) therapy, Liver Diseases (Bile duct obstruction, Cirrhosis , Hepatitis), Hemmorrhagic Disaease of the newborn, DIC, Malabsorption, Fibrinolysis, Vitamin K deficiency.

Interference in PT/INR

Alcohol,antibiotics, aspirin, cimetidine,thrombin Inhibitors(Increase PT)
Barbiturates, oral contraceptives, hormone-replacement therapy (HRT), and vitamin K (Decrease PT).

Hepatitis C Antibodies (HCV) - Rapid Immunoassay

Sample Type : Serum

Hepatitis C Antibodies (HCV)- Rapid Non- Reactive Non- Reactive Immuno-Chromatography

Interpretation

Limitations of the Assay: The test procedure, precautions and interpretation of results for the test must be followed strictly. The test is a qualitative screening assay and is not for quantitative determination of Anti-HCV levels. There is no meaning attributed to line color intensity or width.

This is only a screening test. The test does not rule out HCV infection at a very early stage of infection. Positive results must be confirmed by other diagnostic procedures and clinical data.

Hepatitis B Surface Antigen (HBsAg) - Rapid Immunoassay

Sample Type : Serum

Hepatitis B Surface Antigen (HBsAg) : **Reactive** Non-Reactive Immuno-chromatography

Interpretation

The test is intended as an aid to diagnosis of Hepatitis B infection. Viral hepatitis is a systemic disease primarily involving the liver, and in most cases is caused by one of three viruses: Hepatitis A (HAV), Hepatitis B (HBV) or Hepatitis C (HCV). The antigen found in the envelope of HBV is designated Hepatitis B Surface antigen (HBsAg) and its presence in serum or plasma indicates active HBV infection. HBsAg Rapid Test is a simple, one-step test that detects the presence of HBsAg. HBsAg Rapid Test is a lateral flow immunoassay.

Limitations of the Assay: 1. The test procedure, precautions and interpretation of results for the test must be followed strictly. 2. The test is a qualitative screening assay and is not for quantitative determination of HBsAg. There is no meaning attributed to line color intensity or width. 3. This is only a screening test. The test does not rule out Hepatitis B infection because HBsAg may not be present in sufficient quantity to be detected at a very early stage of infection. 4. Positive results must be confirmed by other diagnostic procedures and clinical data.

Correlate Clinically.

BIOCHEMISTRY

22253480002

Test Description	Value(s)	Units	Biological Ref Range	Method
------------------	----------	-------	----------------------	--------

AMYLASE, SERUM

Sample Type : Serum

AMYLASE	111.0	U/L	UPTO 80	CNP-G3, KINETIC
---------	--------------	-----	---------	-----------------

Interpretation

Amylase is a marker of pancreatic disease - elevated in acute pancreatitis, acute exacerbation of chronic pancreatitis; drug induced acute pancreatitis and obstruction of pancreatic duct by stone / carcinoma.
