

Prisca 5.1.0.17
Date of report: 30/12/25

Patient data			
Name	Mrs. S ASHWINI	Patient ID	0012512300160
Birthday	07/06/94	Sample ID	a1908440
Age at sample date	31.6	Sample Date	30/12/25
Gestational age	12 + 0		
Correction factors			
Fetuses	1	IVF	no
Weight	63	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	1.18 mIU/mL	0.39	
fb-hCG	44.96 ng/mL	0.97	
Risks at sampling date			
Age risk	1:509	Gestational age	11 + 5
Biochemical T21 risk	1:331	Method	CRL Robinson
Combined trisomy 21 risk	1:1997	Scan date	28/12/25
Trisomy 13/18 + NT	<1:10000	Crown rump length in mm	52.5
		Nuchal translucency MoM	0.86
		Nasal bone	unknown
		Sonographer	NA
		Qualifications in measuring NT	Sonographer
Risk		Trisomy 21	
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 1997 women with the same data, there is one woman with a trisomy 21 pregnancy and 1996 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
