Risks at sampling date		Trisomy 21	
Age risk	1:902	Crown rump length in mm	67
Biochemical T21 risk	1:119	Nuchal translucency MoM	0.65
Combined trisomy 21 risk	1:870	Nasal bone	present
Trisomy 13/18 + NT	1:7731	Sonographer	NA
		Qualifications in measuring NT	Sonographer
		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 870 women with the same data, there is one woman with a trisomy 21 pregnancy and 869 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
		Trisomy 13/18 + NT The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:7731, which represents a low risk.
