

Prisca 5.1.0.17
Date of report: 02-01-2026

Patient data			
Name	Mrs. MADIHA KADARI		Patient ID
Birthday	02-11-1991		Sample ID
Age at sample date	34.2		Sample Date
Gestational age	13 + 1		
Correction factors			
Fetuses	1	IVF	no
Weight	69	diabetes	no
Smoker	no	Origin	Asian
			Previous trisomy 21 pregnancies
			unknown
Biochemical data			Ultrasound data
Parameter	Value	Corr. MoM	Gestational age
PAPP-A	0.9 mIU/mL	0.21	13 + 0
fb-hCG	36.47 ng/mL	1.06	Method
			CRL Robinson
			Scan date
			31-12-2025
Risks at sampling date			Crown rump length in mm
			69.8
Age risk	1:332		Nuchal translucency MoM
Biochemical T21 risk	>1:50		1.08
Combined trisomy 21 risk	1:106		Nasal bone
Trisomy 13/18 + NT	1:524		present
			Sonographer
			NA
			Qualifications in measuring NT
			Sonographer
Trisomy 21			
The calculated risk for Trisomy 21 (with nuchal translucency) is above the cut off, which indicates an increased risk. After the result of the Trisomy 21 test (with NT) it is expected that among 106 women with the same data, there is one woman with a trisomy 21 pregnancy and 105 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!			
Trisomy 13/18 + NT			
The calculated risk for Trisomy 13/18 (with nuchal translucency) is 1:524, which represents a low risk.
