## IMPRESSION-USG obs reveals:-

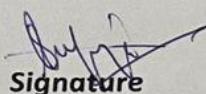

- Single live intrauterine fetus of mean gestational age is 13 weeks 3 days with evidence of normal fetal cardiac activity.

At present fetus shows no obvious gross sonographic demonstrable abnormality for this gestational age and position. However, not all the fetal abnormalities can be detected in single ultrasound scan and fetal position (Adv: Serial ultrasound scans and double marker test)

(Sonological evaluation has its limitations and the report should be correlated with clinical and other relevant history of patient.)

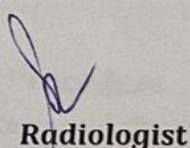

## Declaration of the Person Undergoing Prenatal Diagnostic Test/Procedure

I Mrs DR SUPRIYA GUPTA declare that by undergoing prenatal diagnostic test/procedure I do not want to know the sex of my fetus.
