

Prisca 5.1.0.17
Date of report: 06-01-2026

Patient data			
Name	Mrs. CHANCHAL	Patient ID	0872601050021
Birthday	12-05-2002	Sample ID	B4224791
Age at sample date	23.7	Sample Date	05-01-2026
Gestational age	10 + 5		
Correction factors			
Fetuses	1	IVF	no
Weight	64	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	0.5 mIU/mL	0.32	
fb-hCG	59.04 ng/mL	0.99	
Risks at sampling date			Trisomy 21
Age risk		1:942	The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 1733 women with the same data, there is one woman with a trisomy 21 pregnancy and 1732 women with not affected pregnancies. The PAPP-A level is low. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
Biochemical T21 risk		1:320	
Combined trisomy 21 risk		1:1733	
Trisomy 13/18 + NT		<1:10000	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
