

Prisca 5.1.0.17
Date of report: 09/01/26

Patient data			
Name	Mrs. R T BHAVANI	Patient ID	0352601080050
Birthday	17/01/01	Sample ID	B3800528
Age at sample date	25.0	Sample Date	08/01/26
Gestational age	13 + 0		
Correction factors			
Fetuses	1	IVF	no
Weight	47	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	4.51 mIU/mL	0.71	
fb-hCG	36.97 ng/mL	0.91	
Risks at sampling date			
Age risk	1:978	Gestational age	12 + 2
Biochemical T21 risk	1:3462	Method	CRL Robinson
Combined trisomy 21 risk	<1:10000	Scan date	03/01/26
Trisomy 13/18 + NT	<1:10000	Crown rump length in mm	59.2
		Nuchal translucency MoM	0.78
		Nasal bone	present
		Sonographer	NA
		Qualifications in measuring NT	Sonographer
Risk		Trisomy 21	
The graph shows a risk curve that increases with age. At age 25, the risk is approximately 1:10000, which is below the cut-off line.		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
