

Prisca 5.1.0.17
Date of report: 16-01-2026

Patient data			
Name	Mrs. J PAVARI	Patient ID	0812601130049
Birthday	01-08-2003	Sample ID	B4331045
Age at sample date	22.5	Sample Date	13-01-2026
Gestational age	13 + 0		
Correction factors			
Fetuses	1	IVF	no
Weight	45	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	4.87 mIU/mL	0.73	
fb-hCG	36.95 ng/mL	0.90	
Risks at sampling date			
Age risk	1:1061	Gestational age	12 + 6
Biochemical T21 risk	1:4168	Method	CRL Robinson
Combined trisomy 21 risk	<1:10000	Scan date	12-01-2026
Trisomy 13/18 + NT	<1:10000	Crown rump length in mm	67.3
		Nuchal translucency MoM	0.76
		Nasal bone	present
		Sonographer	NA
		Qualifications in measuring NT	Sonographer
Risk		Trisomy 21	
The graph illustrates the relationship between maternal age and the risk of Trisomy 21. The risk increases exponentially with age. The patient's risk at age 23 is shown as a black bar, which falls within the green region, indicating a low risk.		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among more than 10000 women with the same data, there is one woman with a trisomy 21 pregnancy. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
