REPORT DATE : 10:07 AM 06/12/2025  
CLIENT ADD. : SANJAY CHANDWAK

HISTOPATHOLOGY REPORT

LAB No. : **HP/11848/25**

SPECIMEN : Ovarian cyst biopsy.

GROSS : One large round oval greyish brown cystic mass whole measuring 21.2 x 17.4 x 4.1 cm, c/s- unilocular cyst filled with thin serous fluid, inner wall surface smooth with tiny to small elevation and papillary growth at places.

MICROSCOPY: Show wall of cyst lined by normal appearing low cuboidal to columnar epithelium, wall composed of reduced and thinned stromal tissue with small blood vessels and mild mononuclear cell infiltration and collection at places.

: The lining epithelial cells have infiltrated to adjacent stromal tissues at places.

: The cells show mild anisonucleosis, pleomorphism and occasional mitotic figures.

: At places there is mild elevation lined by normal columnar epithelium and the stromal tissue is compressed and reduced in amount.

IMPRESSION: Findings suggest -

**BORDERLINE PAPILLARY SEROUS CYSTADENOMA.**

METHOD : Histopathology and microscopy.

ADVICE : Clinical correlation and other investigative parameters.

**Dr.R.P.Singh**
