After the result of the Trisomy 21 test it is expected that among 491 women with the same data, there is one woman with a trisomy 21 pregnancy and 490 women with not affected pregnancies.

The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician.

Please note that risk calculations are statistical approaches and have no diagnostic value!

Neural tube defects risk

The corrected MoM AFP (0.53) is located in the low risk area for neural tube defects.
