225, Om Shiv Nagar, Lalghati, Bhopal (M.P.) ♦ Ph. : 0755-4144183, M.: 9926217797

Name:	MRS. SARITA MARAN	Age/Sex:	27 YEARS / FEMALE
Ref. By:	DR. MANIA KUSHWAH	Date:	15/01/2026

USG EARLY OBSTETRIC NT/ NB SCAN

LMP- 11/10/2025

EDD BY LMP 18/07/2026

A single live intrauterine embryo corresponding to mean gestational age of 13 weeks 5 days +/- 1 WEEK.

GESTATIONAL PARAMETERS:

• CRL	-	7.29 cm	13 WKS 3 DAYS
• BPD	-	2.39 cm	14 WKS 0 DAYS
• HC	-	8.43 cm	13 WKS 5 DAYS
• AC	-	7.31 cm	13 WKS 6 DAYS
• FL	-	1.28 cm	13 WKS 5 DAYS

• FHR - 146 bpm/ Regular.

• MGA BY USG - 13 WKS 5 DAY +/- 1 WEEK.

• EDD BY USG - 19 /07/2026 +/- 15 days.

• LIQUOR - Single large vertical pocket 2.5 cm. ADEQUATE.

• Placenta forming posterior grade 0 maturation .

• Cervical length 4.0 cm

• NT- 1.9 MM.

• NB- Nasal bone ossification seen.

• Ductus Venous Flow Is Normal

• Internal OS - Closed

• Both adnexa are normal. No adnexal mass seen.

IMPRESSION: - Real time USG study reveals:

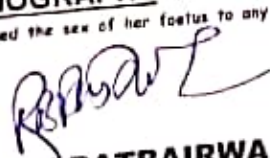

A SINGLE LIVE INTRAUTERINE EMBRYO CORRESPONDING TO MEAN GESTATIONAL AGE OF 13 WKS 5 DAYS +/- 1 WEEK.

Advice: Follow up scan at 18-22 week for congenital anomaly (Target scan).

: Double marker/pathological correlation.

DECLARATION OF DOCTOR/CONDUCTING ULTRASONOGRAPHY

I, DR. RAMBHARAT BAIRWA declare that while conducting ultrasonography, I have neither detect or disclosed the sex of her foetus to any body in any manner

Mrs. SARITA MARAN
27 Years/ Female

VID No. 250162511921135
PID No. P10925559122050
Referred by DR MANA KUSHWAH
Registered On 08/12/2025 6:01 PM
Collected On 08/12/2025 5:59 PM
Reported On 08/12/2025 7:09 PM

Investigation

TSH (Thyroid Stimulating Hormone) -
sensitive, Serum

Electrochemiluminescence immunoassay

UAG

Observed Value

1.17

Unit

µIU/mL

Biological Reference Interval

0.54-5.3

First Trimester: 0.1-2.5

Second Trimester: 0.2-3.0

Third trimester: 0.3-3.0

Interpretation:

- Increased TSH is seen with intake of Iodine, Lithium, Amiodarone drugs and also indicates considerable physiologic & seasonal variation.
- Decreased TSH values require correlation with patient age & clinical symptoms and seen with intake of few drugs e.g. L-dopa, glucocorticoids.
- Transient alteration in TSH is seen in non-thyroidal illness like severe infections, liver disease, renal and heart failure, severe burns, trauma and surgery etc.

Clinical Utility: Levels of TSH are used for monitoring of thyroid related disorders.

Interference: Patients on Biotin supplement may have interference in some immunoassays. For sample collection, at least 8-hours time is recommended for individuals taking high dose of Biotin (more than 5 mg per day) supplements.

Notes: TSH levels may fluctuate based on few factors such as pregnancy, illness and age. Also, time of sample collection, methodologies used to analyze the test, usage of certain drugs, diet may have impact on TSH levels. TSH may show around 50% variation even when done at different times of day due to its association with circadian rhythm.

Associated Tests: T3 (T0029), T4 (T0031) free T3 (T0028), free T4 (T0030), reverse T3 (R1004), Thyroid Antibodies (T0061), Thyroid Comprehensive Profile-1 (T0062)
