

Prisca 5.1.0.17
Date of report: 26-01-2026

Patient data			
Name	Mrs. SUPRIYA	Patient ID	0772601260009
Birthday	18-11-1996	Sample ID	B3955933
Age at sample date	29.2	Sample Date	25-01-2026
Gestational age	12 + 2		
Correction factors			
Fetuses	1	IVF	no
Weight	62	diabetes	no
Smoker	no	Origin	Asian
		Previous trisomy 21 pregnancies	unknown
Biochemical data		Ultrasound data	
Parameter	Value	Corr. MoM	
PAPP-A	2.47 mIU/mL	0.72	
fb-hCG	43.5 ng/mL	0.99	
Risks at sampling date			
Age risk	1:703	Gestational age	12 + 1
Biochemical T21 risk	1:2069	Method	CRL Robinson
Combined trisomy 21 risk	1:3783	Scan date	24-01-2026
Trisomy 13/18 + NT	<1:10000	Crown rump length in mm	57
		Nuchal translucency MoM	1.27
		Nasal bone	present
		Sonographer	NA
		Qualifications in measuring NT	Sonographer
Risk		Trisomy 21	
The graph shows the risk of Trisomy 21 as a function of maternal age. The y-axis represents risk from 1:10 to 1:10000. The x-axis represents age from 13 to 49. A red shaded area above the curve represents the risk above the cut-off. A yellow shaded area below the curve represents the risk below the cut-off but above the age risk. A green shaded area below the curve represents the risk below the cut-off. A vertical line at age 29.2 indicates the patient's age risk.		The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk. After the result of the Trisomy 21 test (with NT) it is expected that among 3783 women with the same data, there is one woman with a trisomy 21 pregnancy and 3782 women with not affected pregnancies. The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value! The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)). The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!	
Trisomy 13/18 + NT			
The calculated risk for trisomy 13/18 (with nuchal translucency) is < 1:10000, which represents a low risk.
