PATIENT NAME	MRS. NILAM ATUL KAKADE	Date:	27 Jan 2026
REFERRED BY:	DR. DEEPAK JAGTAP	AGE:-	19/ MALE

OBSTETRIC USG

The real time, B mode & colour doppler sonography of gravid uterus was performed.

LMP-25 Oct 2025	G.A BY LMP - 13 Wks & 3 D	EDD BY LMP - 01 Aug 2026
	G.A BY USG - 13 Wks & 3 D	EDD BY USG - 01 Aug 2026

There is a single, live, intrauterine foetus, in changing presentation and lie.

Foetal Movements : Present.

Foetal Cardiac Pulsations : Present. FHR - 162 bpm

FOETAL PARAMETERS :

CRL	72.9 mm	13 Wks & 3 D
-----	---------	--------------

- ❖ Nuchal Translucency (NT) is : 1.24 mm, appears within normal limits.
- ❖ Nasal Bone Seen : measures 2.4 mm, appears normal.
- ❖ Ductus venosus flow pattern: Normal. No e/o 'a' wave reversal seen.
- ❖ Intra cranial translucency (IT): 2.35 mm Appears normal.

Maternal Survey:

- The placental is upper segment.
- Cervix measures 3.39 cm.
- Internal OS is closed.

Fetal Survey:

- Visualized skull shows normal ossification. Choroid plexuses on either side appears normal. Falx is seen in mid line. Thalam, Mid brain is seen.
- No e/o cystic lesion in neck.
- Normal cardiac situs is seen. Four chamber view is subtly visible. No e/o TR.
- Stomach bubble, Urinary bladder seen.
- Upper limb appears normal.
- Lower limb appears normal.

Assigned Gestational Age by USG: 13 Wks & 3 D ,By CRL.

Screening Uterine artery reveals PI :

Right Uterine artery	1.4 cm	Mean PI of uterine arteries is about 1.74 which corresponds to 68 centile and appears Normal.
Left uterine artery	2.08 cm	

IMPRESSION: USG STUDY REVEALS.

- SINGLE LIVE INTRAUTERINE GESTATION OF AGE 13 Wks & 3 D.
- EDD BY LMP : 01 Aug 2026
- EDD BY USG : 01 Aug 2026
- NO OBVIOUS GROSS CONGENITAL STRUCTURAL ABNORMALITY DETECTED AT PRESENT.

Recommendation: Double marker correlation and Level II Anomaly scan at 18-22 wks.
