Risks at sampling date			Trisomy 21
Age risk		1:964	The calculated risk for Trisomy 21 (with nuchal translucency) is below the cut off, which indicates a low risk.
Biochemical T21 risk		1:1180	After the result of the Trisomy 21 test (with NT) it is expected that among 6971 women with the same data, there is one woman with a trisomy 21 pregnancy and 6970 women with not affected pregnancies.
Combined trisomy 21 risk		1:6971	The calculated risk by PRISCA depends on the accuracy of the information provided by the referring physician. Please note that risk calculations are statistical approaches and have no diagnostic value!
Trisomy 13/18 + NT		<1:10000	The patient combined risk presumes the NT measurement was done according to accepted guidelines (Prenat Diagn 18: 511-523 (1998)).
			The laboratory can not be hold responsible for their impact on the risk assessment ! Calculated risks have no diagnostic value!
