| REF BY DR | MITALI SOREN | DATE | 26.01.2026 |
| REPORT OF | USG OF GRAVID UTERUS | | |

ULTRASONOGRAPHY REPORT

L.M.P: 29.10.2025

EDD BY L.M.P: 05.08.2026

Uterus is gravid.

A regular gestational sac is seen in the uterine cavity containing foetus.

The cardiac activity is visualized at the time of scan. **FHR= 167 BPM**

CRL - 70.4 mm 13 Weeks 02 Days.

EDD (AUA) : 01.08.2026

Decidual reaction is normal.

Both the **ovaries** are normal in size and echo-pattern.

No free fluid is seen in POD.

Nasal bone is present and measures approx. 2.5 mm.

Nuchal translucency measures approx. 1.7 mm.

IMPRESSION:- ONGOING EARLY SINGLE PREGNANCY

* Not all congenital anomalies are detectable on ultrasound examination alone.

* The best USG counting of the number of GS between 6th to 10th.weeks

SUGGESTION : Follow up scan.

DR. PARVEZ IQBAL
CONSULTANT RADIOLOGIST

Thanks for your kind referral.

*Sex of the foetus is not disclosed to anybody in any manner. All the sonic measurements are subjected to statistical variation. Some fatal anomalies are not seen due to foetal position, less amniotic fluid and inappropriate time of scanning. Maternal fat may limit optimal penetration of the ultrasound.
